

Factor10

Project Outline: Factor10

Context

Over the last 40 years, annual extraction of materials has more than tripled. As the population grows and more consumers enter the middle class, the total demand for resources is expected to reach 130 billion tons by 2050, up from 50 billion in 2014. That's an overuse of the Earth's total capacity by more than 400%.

Our current linear economic model is reaching a tipping point. In order to reach Vision 2050 in which not a particle of waste exists, eco-efficiency of materials must improve by a factor of ten, as referenced in the Factor10 Institute's 1994 findings.

The circular economy provides an opportunity for business to capitalize on economic growth that's independent from resource consumption.

Project overview

Factor10 is WBCSD's flagship circular economy project. Its members aim to achieve a sustainable world through the circular economy.

Workstreams within Factor10 include Metrics, Policy, and four Sector Deep Dives on Automotive, Built Environment, Bioeconomy and E-waste.

Approach

Value

- Become the epicenter for circular business action, offering a project that tackles the barriers that companies face in their transition towards a circular economy.

Impact

- Develop transformative cross-value chain solutions that unlock circular opportunities for business.

Voice

- Amplify the global business voice, by forging partnerships and identifying platforms that showcase policy recommendations and business leadership in the circular economy.

Who is involved

Over 35 companies across 15 sectors, representing more than USD \$1.4T in annual turnover.

Options for engagement

- **Lead:** Highlight your company's leadership in the circular economy and participation in Factor10 through events and media.
- **Connect:** Connect with key companies and organizations to share best practices and lessons learned.
- **Shape:** Contribute to Factor10's workstreams on Metrics, Policy, Sector Deep Dives and future workstreams.
